Attention-Deficit/Hyperactivity Disorder (ADHD)

Assessments for Children & Adolescents

Feel to Heal Psychology is excited to offer comprehensive ADHD assessment services for child and adolescent clients, with our team of qualified Psychologists.

Which assessment tools are administered for a child ADHD assessment?

1. Clinical Interview with the child's parent/observer
2. Wechsler Intelligence Scale for Children – 5th Ed (WISC-V)
3. Wechsler Individual Achievement Test – 3rd Ed. (WIAT-III)
4. Conners' ADHD Rating Scale – 4th Ed. (CONNERS-4)
5. Behaviour Rating Inventory of Executive Function – 2nd Ed. (BRIEF-2)
6. Examination of previous school and/or assessment reports

What appointments will be scheduled for a child ADHD assessment?

1. Intake Session (50 mins – parent/observer appointment)
2. Testing Session #1 (120 mins – client appointment)
3. Testing Session #2 (120 mins – client appointment)
4. Report Feedback Session (30 minutes – *optional service*)

What happens after the child ADHD assessment is completed?

All findings are presented to the client in a comprehensive psychologist report that will consider all potential explanations for ADHD-like presentations including (but not limited to): specific learning disorders, intellectual disability or giftedness, other behavioural disorders, and mental health/trauma history. The report will include any confirmed diagnoses, if applicable. We also offer an optional feedback session to discuss your child's report in further detail.

What are the next steps?

To discuss client suitability and availability for upcoming appointments, please contact our friendly reception team via the contact details provided.
